

Azalea Software's Barcode Solutions Now Supported by Crystal Reports 2008

FOR IMMEDIATE RELEASE 03dec07

SEATTLE - Azalea Software announced today that its barcode printing tools are now built into the newly released Crystal Reports® 2008 from Business Objects, the world's leading provider of business intelligence solutions.

This integration of Azalea's leading barcode software now allows all Crystal Reports 2008 users to create popular barcode types including UPC, Code 128, Code 39, and POSTNET barcodes in a simple one-click process.

"The integration of Azalea's barcode software into Crystal Reports 2008 solidifies the long-standing relationship between our two companies," said Jerry Whiting, president and CEO of Azalea Software. "Our shared customers will benefit immensely from having a seamless barcode printing solution right at their fingertips with this exciting release."

"We are taking Crystal Reports to a whole new level today," said James Thomas, Vice President, BI Content & Tools, Business Objects. "Our customers will now be able to quickly integrate any Azalea barcode product directly into their reports, to increase the report usability and reduce their total ownership cost as a result."

As part of the successful, long-standing relationship between Azalea Software and Business Objects, Crystal Reports users have in the past been able to create high-quality barcodes using Azalea's User Function Library (UFL). Now with Crystal Reports 2008, Crystal Reports users have access to Code 39 barcode functionality right out of the box. Users who need additional barcoding capabilities will find support for multiple barcode types built into Crystal Reports 2008, and easy to activate after purchasing fonts from Azalea Software.
